Introduction

Math Mammoth Clock workbook is designed especially for homeschooling parents. It is a worktext (meaning it contains both the teaching and the exercises) that you will find easy to teach from without a need of a separate teacher's manual.

This book covers reading the clock, figuring out simple time intervals, and using the calendar, all in one book. The topics progress starting from the first grade level to the third grade level. Therefore, you also can let your child work the pages of this book in different time periods, and not go through it all at once, depending on your child's current level.

The lessons are divided to the grade-levels this way: reading the clock to the half-hour is first grade material; reading the clock to the five-minute intervals is second grade; and reading the clock to the minute is third grade level. I realize this is somewhat arbitrary, and there is no need to follow it exactly but I want to explain it so you can keep it in mind that the material in this book does get more difficult towards the end.

You will need a practice clock, such as an alarm clock, where the child can turn the clock hands. Reading the clock is a skill that will be used in everyday situations, so this topic (fortunately) is one that children also learn by experience, and do not easily forget once learned.

You can make more clock reading worksheets at www.homeschoolmath.net/worksheets/clock.php

I wish you success in your math teaching!
