

Using the Calendar

In a calendar, the weekdays from Sunday through Saturday (or sometimes from Monday through Sunday) are written in a row above the numbers. A *week* has 7 days.

The week from the 11th through the 17th is highlighted. It is 7 days.

What day is one week after September 19th?

It is the day directly under it on the calendar, September 26th.

You could also add 7 to the day number: $19 + 7 = 26$.

November 2008						
Sun	Mon	Tue	Wed	Thu	Fri	Sat
						1
2	3	4	5	6	7	8
9	10	11	12	13	14	15
16	17	18	19	20	21	22
23	24	25	26	27	28	29
30						

What day is one week after November 25th?

It is December 2nd, because it would be directly under the number 25, if we continued writing the December days in the boxes.

What day is three weeks after November 17th?

You need to "jump" down three rows. First go from November 24th to December 1st on the next calendar, and then two weeks more from there. December 15th is exactly three weeks later than November 24th.

What day is six weeks after November 14th?

Go down six rows, but skip from November 28th directly to the first Friday of December, and then on from there. It is December 26th.

What day is three weeks before December 10th?

December 3rd is one week before that. Go "up" one more week - to November 26th, and one more, to November 19th.

What day is two months after March 10th?

Just change the name of the month: it is May 10th.
