

Solids 1

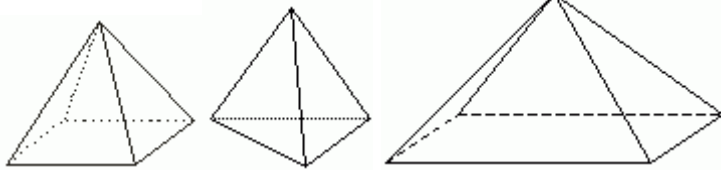

A rectangular prism in everyday speech is called a “box”.

A cube is a box, too, but all of its sides are equally long.

A cylinder has the same-size circle on the bottom and at the top.

A pyramid's bottom shape can be any many-sided figure.

A cone has a circle at one end and a point at the other.

1. Label the pictures with *box*, *cube*, *cylinder*, *pyramid*, or *cone*.
