

# Equivalent Fractions

The two fraction strips show an equal amount. So we can write an equal sign between the two fractions:

$$1 \frac{1}{5} = 1 \frac{2}{10}$$

If you eat half of a pizza, or  $\frac{2}{4}$  of a pizza, you have eaten the same amount.

$$\frac{1}{2} = \frac{2}{4}$$

1. Shade the pie parts that the first fraction shows. Shade the same *amount of pie* in the second picture. Write the second fraction.

 <b>a.</b> $\frac{1}{4} =$	 <b>b.</b> $\frac{1}{2} =$	 <b>c.</b> $\frac{6}{8} =$	 <b>d.</b> $\frac{1}{2} =$
 <b>e.</b> $\frac{2}{3} =$	 <b>f.</b> $\frac{10}{12} =$	 <b>g.</b> $\frac{1}{3} =$	 <b>h.</b> $\frac{8}{12} =$

2. Write the fractions that have thirds with sixths instead. You can imagine shading parts in the pictures.

		<b>a.</b> $\frac{1}{3} =$	<b>b.</b> $\frac{2}{3} =$	<b>c.</b> $2 \frac{1}{3} =$	<b>d.</b> $\frac{4}{3} =$	<b>e.</b> $1 \frac{2}{3} =$
--	--	---------------------------	---------------------------	-----------------------------	---------------------------	-----------------------------

3. Write the fractions that have fifths with tenths instead.

		<b>a.</b> $\frac{1}{5} =$	<b>c.</b> $\frac{4}{5} =$	<b>c.</b> $1 \frac{3}{5} =$	<b>d.</b> $\frac{2}{5} =$	<b>e.</b> $5 \frac{1}{5} =$
--	--	---------------------------	---------------------------	-----------------------------	---------------------------	-----------------------------

4. Write the fractions that have thirds with ninths instead.

		<b>a.</b> $\frac{1}{3} =$	<b>c.</b> $\frac{2}{3} =$	<b>c.</b> $1 \frac{1}{3} =$	<b>d.</b> $5 \frac{2}{3} =$	<b>e.</b> $\frac{5}{3} =$
--	--	---------------------------	---------------------------	-----------------------------	-----------------------------	---------------------------
