

2. Simplify.

<p>a. Each _____ slices were merged together.</p>  $\frac{3}{6} = \frac{1}{2}$ <p style="text-align: center;"> $\div 3$ $\frac{3}{6} = \frac{1}{2}$ $\div 3$ </p>	<p>b. Each _____ slices were merged together.</p> 	<p>c. Each _____ slices were merged together.</p> 	<p>dg. Each _____ slices were merged together.</p> 
<p>e. Each _____ slices were merged together.</p> 	<p>f. Each _____ slices were merged together.</p> 	<p>g. Each _____ slices were merged together.</p> 	<p>h. Each _____ slices were merged together.</p> 

3. Draw a picture and simplify the fractions.

<p>a. Merge each two parts.</p>  $\frac{2}{6} = \frac{\quad}{\quad}$	<p>b. Merge each four parts.</p>  $\frac{\quad}{\quad} = \frac{\quad}{\quad}$	<p>c. Merge each three parts.</p>  $\frac{\quad}{\quad} = \frac{\quad}{\quad}$
<p>d. Merge each six parts.</p>  $\frac{\quad}{\quad} = \frac{\quad}{\quad}$	<p>e. Merge each seven parts.</p>  $\frac{\quad}{\quad} = \frac{\quad}{\quad}$	<p>f. Merge each four parts.</p>  $\frac{\quad}{\quad} = \frac{\quad}{\quad}$
