

# Long Division 2

Tens division is not even. Subtract to find the remainder ten(s).  
Combine the remainder ten(s) with the ones. Complete the examples.

The **remainder ten** is combined with ones.

$$\begin{array}{r} 2 \\ 2 \overline{) 58} \\ \underline{-4} \phantom{8} \\ 18 \end{array}$$

The **two remainder tens** are combined with ones.

$$\begin{array}{r} 2 \\ 3 \overline{) 84} \\ \underline{-6} \phantom{4} \\ 24 \end{array}$$

1. Divide into groups.

 ..... <b>a.</b> $4 \overline{) 64}$	 ..... <b>b.</b> $3 \overline{) \phantom{00}}$	 .. <b>c.</b> $3 \overline{) \phantom{00}}$	 ..... <b>d.</b> $5 \overline{) \phantom{00}}$
------------------------------------------------------------------------------------------------------------------------------	----------------------------------------------------------------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------	------------------------------------------------------------------------------------------------------------------------------------------

2. Divide. Combine the remainder ten(s) with the ones.

- |                               |                               |                               |                               |
|-------------------------------|-------------------------------|-------------------------------|-------------------------------|
| <b>a.</b> $4 \overline{) 76}$ | <b>b.</b> $2 \overline{) 78}$ | <b>c.</b> $3 \overline{) 78}$ | <b>d.</b> $5 \overline{) 95}$ |
| <b>e.</b> $2 \overline{) 52}$ | <b>f.</b> $2 \overline{) 94}$ | <b>g.</b> $3 \overline{) 54}$ | <b>h.</b> $4 \overline{) 92}$ |
