Introduction

Math Mammoth Measuring Worksheets Collection includes all measuring-related worksheets from Math Mammoth Grade 3, Grade 4, Grade 5, and Grade worksheets collections, here in one handy package for those who would need them.

The grade-level worksheets packages were originally created for and in collaboration with SpiderSmart, Inc. tutoring company.

These sheets therefore span about four grade levels; however here they are organized by topic. The teacher can choose a sheet of the right difficulty level, or even assign some students easier sheets and some students more challenging ones.

The worksheets cover measuring length, weight (or mass), capacity (volume), temperature and time. There are sheets for either customary units or metric units, and several where both are used.

In some worksheets the students are guided to measure and/or estimate the length, weight, or capacity of real-life objects so they can become familiar with the process. Other sheets concentrate on paper-and-pencil problems about conversion between different measurement units.

I hope the problems will fit your needs.

I wish you success with math teaching!
