Introduction

Math Mammoth Statistics Collection includes graphs, data gathering and analysis related worksheets from Math Mammoth Grade 3, Grade 4, Grade 5, Grade 6, and Grade 7 worksheets collections. The grade-level worksheets packages were originally created for and in collaboration with SpiderSmart, Inc. tutoring company.

The worksheets in this book have been pulled out of those aforementioned collections to create a separate, handy package for those who would need worksheets or a workbook on various statistics topics. This could be useful for example in remedial teaching, in adult teaching centers, or just reviewing.

The sheets span about five grade levels (from grade 3 to 7); however the majority of the sheets are from grades 5-7. In this collection, the worksheets are organized by topic (see table of contents). Within each topic, the difficulty level varies because the sheets have originally been made for different grade levels.

Thus the teacher can choose a sheet of right difficulty level, or even assign some students easier sheets and some students more challenging ones, on the same topic.

Math Mammoth Statistics Worksheets Collection covers bar graphs, line graphs, circle graphs - both reading and drawing them - data analysis, mean, median, and mode, box-and-whisker plots, stem-and-leaf plots, measures of variation, misleading statistics, data gathering, and a few statistics projects.

I hope the problems will fit your needs.

I wish you success with math teaching!

Maria Miller, the author
