

# Errata for Math Mammoth Grade 3, 2024 edition

## Grade 3-A Answer Key

### Chapter 1

#### **Mental Math with Three-Digit Numbers (student worktext p. 30)**

#4. a. The answers should be 259, 89, 239 instead of 269, 89, 249.

(Error noted Jul 29, 2024)

---

#### **A Letter for the Unknown 1 (student worktext p. 32)**

#2. a. The answer partially uses 65 instead of 56. The answer should be:

$$41 + x = 56 \text{ or } x + 41 = 56 \text{ or } x = 56 - 41 \text{ or } 56 - 41 = x. \text{ Solution: } x = 15. \text{ Ann needs 15 more pins.}$$

(Error noted Aug 15, 2024)

---

#### **The Connection with Addition and Subtraction (student worktext p. 35)**

#4. a. The answer uses 660 instead of 650. The answer should be:

$$560 + x = 650 \text{ or } x + 560 = 650; x = 90$$

(Error noted Aug 15, 2024)

---

#### **Review Chapter 1 (student worktext p. 41)**

The answers for 6, 7, 8, and 9 were not matching the worktext. The correct answers are:

6. a. 3, 5

b. 3, 4

c. 8, 7

7. Student equations will vary; check the student's equations. For example:

a.  $N = 21 + 17 - 5$ .  $N = 33$ . The squirrel has 33 nuts now.

b.  $15 + 5 + M = 28$ .  $M = 8$ . He still needs \$8.

8. The numbers in the list are skip-counting by 7. When you add 7 repeatedly, every other number is even and every other number is odd. Since 32, the last number in the list, is even, the next number will be odd.

9. a. 6

b. 7

c. 6
