

# Data analysis 1

The line graph below shows how much electricity was produced by certain fuels in the US from 1999 to 2009.

1. Is the electricity production by some fuels/sources increasing? Which?
2. Is the electricity production by some decreasing? Which?
3. Is the electricity production by some fuels/sources staying fairly constant? Which?
4. Which two electricity sources were nearly equally important in electricity production?
5. Estimate from the graph the total electricity produced by the top three electricity sources. (Your answer will be in thousand megawatt-hours)
